

ABSTRACT

Health and Family Welfare Department – SimpleGov - Tamil Nadu Clinical Establishment Act (TNCEA) - Simplification of process related to Registration and Renewal of Medical institutions under the Tamil Nadu Clinical Establishments (Regulation) Rules, 2018 – Recommendation of the Empowered Committee - Orders – Issued.

HEALTH AND FAMILY WELFARE (Z2) DEPARTMENT

G.O.(Ms) No: 41

Dated: 13.02.2026

திருவள்ளூர் ஆண்டு 2057

விசுவாச வருடம், மாசி - 1

Read:-

1. G.O.(Ms) No.105, Human Resources Management (AR-1) Department, Dated: 28.11.2023.
2. Minutes of the Empowered Committee meeting, Dated: 09.02.2026.

ORDER:-

In the Government Order first read above, a Screening Committee and an Empowered Committee have been constituted for scrutinizing and approving the SimpleGov proposals to ensure a comprehensive evaluation and approval of proposed modification under the category of Government-to-Citizen (G2C), Government-to-Business (G2B) and other services that are being accessed from Government of Tamil Nadu.

2. The Advisor, SimpleGov and his team has compiled the proposal for simplification in registration/renewal of medical institutions.

3. The following are the challenges faced in the existing procedure in registration/renewal of medical institutions under Tamil Nadu Clinical Establishments (Regulation) Rules, 2018:-

a) Multiple unnecessary or cumbersome fields during the application process:

i) Equipment list is broad-based and vague:

The equipment list field is vague and does not specify which types of equipment to include, making it unrealistic for large or multispecialty hospitals to report a comprehensive inventory for registration purposes. Moreover, listing all tests and procedures performed is especially burdensome for institutions offering a wide and dynamic range of diagnostics or treatments, since these can frequently change and are numerous.

ii) Staffing and Certificate upload repetition:

The requirement to itemize support staff and paramedical personnel creates considerable complexity for larger hospitals, especially those with rotating or floating staff, which is not quite rational. Maintaining accurate and up-to-date details in such a dynamic environment can be a challenging task and may not always be directly

relevant. In an attempt to ensure adequate staff, this provision brings in an element of impracticality in reporting.

Additionally, the existing system of uploading professional certificates for doctors, nurses, dentists and pharmacists is cumbersome and repetitive. Even after bulk uploading the staff list, applicants must upload certificates individually for each staff member, thereby increasing the workload. Such certificates are not pursued by anyone as the volume is huge and hence, the entire process does not yield any positive outcome.

Furthermore, the system mandates double confirmation for every employee entry after all details are uploaded, requiring manual verification for each one. This step is time-consuming and duplicative, offering limited advantage in terms of compliance or safety assurance.

b) Redundant documentation for In-House services: The mandatory submission of third party service agreements (Ambulance, Laboratory, Mortuary) creates a bottleneck for applicants with in-house facilities.

c) Portal performance issues: The current Tamil Nadu Clinical Establishments Act (TNCEA) online portal is frequently slow and experiences technical glitches, resulting in delays and frustration for applicants during registration and renewal. Data regarding non submission documents by the institutions can only be viewed by the licensing authority by opening individual applications which is laborious and time exhausting. These system inefficiencies add unnecessary administrative burden and risk discouraging compliance. Improving the portal's speed, stability and user interface is essential to ensure timely and reliable processing for all users.

d) Pendency in laboratory licensing: Categorisation of laboratories is not done in TNCEA. Hence, pendency in laboratory licensing is increasing.

4. The Empowered Committee in its meeting on 09.02.2026 perused and considered the minutes of Screening Committee on the possibilities of simplification of procedures in registration/renewal of medical institutions and the following decisions were made:-

I. Recognition of National Accreditation for TNCEA registration and renewal:

- The Government shall formally recognize NABH (National Accreditation Board for Hospitals & Healthcare Providers), NQAS (National Quality Assurance Standards), JCI (Joint Commission International), and NABL (National Accreditation Board for Testing and Calibration Laboratories) accreditations as sufficient for the registration and renewal of clinical establishment licenses under the TNCEA to proactively eliminate administrative redundancies.
- Applications shall be submitted online and auto-verified against accreditation databases, following which registration certificates shall be generated digitally through the TNCEA portal, subject to verification and clarification wherever required.
- Non-accredited clinical establishments shall continue to be registered under the regular provisions of TNCEA and the decided mechanism shall operate as a complementary facilitative measure.
- For those institutions that have obtained NABH/NQAS/JCI/NABL accreditation the following process shall be implemented:
 - a. The application for registration or renewal of a private clinical establishment shall be submitted through the online portal available on the e-Sevai platform / TNCEA Portal.

- b. The applicant seeking registration or renewal of a clinical establishment in Tamil Nadu shall furnish the details of the approved NABH/NQAS/JCI/NABL accreditation certificate, including the unique accreditation number, along with the name of the accreditation board name, type of certification/accreditation level, validity period, specifying the date of issuance and expiry of such accreditation, and also upload the NABH/NQAS/JCI/NABL issued certificate.
- c. Upon the submission, the system-based auto verification process shall function by digitally comparing the credentials submitted by the applicant with records maintained in the NABH/NQAS/JCI/NABL database. Upon successful matching of all credentials, the application is approved with real-time notification.
- d. Subsequently, the TNCEA portal generates the Certificate of Registration in Form II as per the Clinical Establishments (Regulation) Rules, 2018. This certificate includes a unique registration number and features a QR code prominently displayed. The QR code encapsulates the NABH or other accreditation details, such as the unique accreditation number, validity period, issuance, and expiry dates, allowing instant digital verification of authenticity.
- e. In the Tamil Nadu Clinical Establishments (TNCEA) application portal, when discrepancies or incomplete matches arise in an application, the application is flagged and sent for clarification, requiring the applicant to furnish the necessary details. If after submitting the replies for clarifications the application is still flagged, the applicant may be asked to complete the registration through a fresh registration option on the TNCEA portal.
- f. The TNCEA application portal or e-Sevai platform may use customized workflow management solutions embedded within its application portals. These digital workflows automate and streamline essential tasks, including application submission, credential verification and certificate issuance. The system is integrated through Application Programming Interfaces (APIs) with national accreditation bodies like NABH/NQAS/JCI to facilitate real-time authentication of credentials alongside automating decision-making processes. However, such integration necessitates a legally binding Memorandum of Understanding (MoU) or data-sharing agreement between TNCEA and NABH. Until such an interface is achieved, the verification of NABH/NQAS/JCI/NABL accreditation having been received may be done at the Director of Medical and Rural Health Services office by checking out the NABH portal within 15 days from the date of application. The TNCEA application system shall also incorporate regulatory control mechanisms to digitally flag clinical establishments whose registration has been suspended or cancelled or which are under investigation for fraud or serious violations, and such flagged establishments shall be system-restricted from submitting fresh applications, renewals, or availing deemed registration until clearance is granted by the competent authority.

- g. Clinical establishments that have not obtained NABH/NQAS/JCI accreditation are still fully entitled to apply for and obtain registration certificates through the regular provisions under the TNCEA and its Rules, ensuring legal operation and regulatory oversight.

➤ The validity of the TNCEA certificate issued based on NABH/NQAS/JCI/NABL

The validity of the clinical establishment registration certificate issued under the Tamil Nadu Clinical Establishments Act (TNCEA) shall be reckoned from the date of issuance of the accreditation certificate. Furthermore, the validity period of the registration certificate shall correspond mutatis mutandis to the standard validity period prescribed for each category of clinical establishment as per the norms of the accreditation body and applied under this Act. Such registration shall only remain in force so long as the NABH accreditation is valid and continuously in force.

- In addition, if NABH accreditation lapses, healthcare providers must follow the same application process as for initial registration to renew their Tamil Nadu Clinical Establishments Act certificate, applying mutatis mutandis with the NABH/NQAS/JCI accreditation. Conversely, it was decided that if NABH/NQAS/JCI/NABL accreditation is lapsed, suspended or revoked, the registered clinical establishment must undergo a standard TNCEA revalidation process, which includes inspections and reviews, within the prescribed timeframe to continue operations for the remaining registration period. Additionally, if the hospital does not comply, it shall be held accountable for mandatory provisions otherwise in force.
- The IT application portal shall provide for alerts in the situation of lacking in validity.

II. TNCEA registration and renewal without NABH/NQAS/JCI/NABL

- The clinical establishments without NABH/NQAS/JCI/NABL shall register in the following manner:

A. Streamlined Query and Upload Portal (mainly for those without NABH/NQAS/JCI accreditation):

i. Registration pathways:

An online navigation page for clinical establishment registration in Tamil Nadu shall be created with two clear options as follows:

- a) Registration using NABH/NQAS/JCI credentials - for establishments already accredited by the National Accreditation Board for Hospitals & Healthcare Providers (NABH) OR National Quality Assurance Standards (NQAS).

- b) Fresh registration/renewal under the Tamil Nadu Clinical Establishments Act (TNCEA) - for clinical establishments without NABH/NQAS/JCI accreditation seeking initial registration under TNCEA regulations.

ii. Mandatory support documents to upload during the initial Application:

To streamline the review process and mitigate delays caused by incomplete submissions, the portal shall mandate the upfront upload of all required support documents during the initial application phase. This interface will function as a strict digital checklist; strictly upon the successful upload of all mandatory documents, the system will unlock the subsequent stage for uploading

GI-tagged photographs and selecting a date for physical verification. This prerequisite acts as a 'Desktop Verification' mechanism, allowing the Competent Authority to effectively track compliance and ensuring that field inspections are scheduled only for applications that are documented-ready.

iii. Real-Time Adaptive document checklist in Portal

- a. The current system in Tamil Nadu Clinical Establishment registration includes a tab in Form I where applicants declare if their establishment is attached to additional services like a laboratory, imaging center, or blood bank, and specialties available, such as orthopedics, or any other.
- b. Once the applicant selects the specific attached services (e.g., lab, imaging, blood bank), the portal shall dynamically unlock only those documents mandatory for those specific services, instead of making all documents required. A normal list of documents shall include the following:
 1. TN Pollution Control Board License (CTE for establishment of the hospital and CTO commencement of functioning).
 2. Bio-Medical Waste Agreement (for the entire institution)
 3. Atomic Energy Regulatory Board (AERB) Certificate (only for advanced diagnostics ranging from X-ray, MRI, PET scan etc)
 4. Fire Safety License
 5. Pre-Conception and Pre-Natal Diagnostic Techniques (PCPNDT) License (if applicable)
 6. Building Stability Certificate (Public Building License)
 7. Lift License (if lifts are available)
 8. Rental Agreement
 9. List of major Equipments available
- c. The mandatory documents related to the selected services should be clearly marked with an asterisk (*) for easy identification.
- d. This dynamic document requirement approach will reduce unnecessary burden on applicants by avoiding the submission of irrelevant documents.
- e. The portal should ensure that the dynamic checklist adapts in real-time as selections change.
- f. Consequently, once the mandatory documents are uploaded and geo-tagged photos are uploaded, an application number is generated, which is considered as provisional registration.
- g. For the documents which can only be obtained after obtaining a registration certificate from TNCEA, such documents shall be provided with an option to be submitted later once such documents are procured, but they shall be uploaded.
- h. For instance, when the applicant selects the "hospital speciality available" as "Gynecology", the mandatory documents should normally include PCPNDT license, whereas a PCPNDT licence can be obtained only with TNCEA registration. Hence, the PCPNDT license shall not be mandatory and that field alone would be empty and in the document checklist portal PCPNDT licence column, the field would display as "yet to be uploaded".

iv. Online Geo-Tagged and Time-Stamped Inspection:

- a. To introduce a technology-driven inspection process that will enable virtual site visits conducted by the inspector assigned for the task. The assigned inspector shall examine geo-tagged photos and videos with precise timestamps uploaded by the applicant. To facilitate this, it was decided to

introduce a dedicated tab to be integrated within the online application form, enabling applicants to upload geo-tagged and time-stamped photographic and video evidence of the clinical establishment.

- b. Consequently, to manage the large numbers involved, the assessment and examination of a clinical establishment with online geo-tagged photo and video upload option shall be limited to clinical establishments that have a total built-up area of less than 3000 sq ft. of built-up area. And it was further decided that such online assessment shall be deemed to be an online inquiry.
- c. Most importantly, once the data is uploaded for clinical establishments with a total built-up area of less than 3000 sq ft. the authorized officer shall approve the same within 30 days from the date of uploading, and if the process of online perusal is not completed within the limitation period, the verification is deemed to be approved by the concerned authority.
- d. For larger establishments exceeding built up area of 3000 sq ft, physical site inspections by inspectors so authorized may be required. It was decided that after document verification, applicants shall receive an option to select three options of a mutually convenient date and time for the physical inspection. The date of inspection shall be finalised based on the availability of the inspector who has been duly authorized to conduct the inspection. On the scheduled date, the inspector shall perform the on-site verification and upload the inspection report online immediately. If the applicant fails to fix a date to schedule an inspection within 10 days of the message being received, the concerned authority shall visit the clinical establishment of the applicant for physical verification with prior intimation to the applicant.
- e. Any additions to an approved establishment that result in a total built-up area exceeding 3,000 sq. ft. necessitate a fresh application for approval and physical verification.

v. Upload Portal:

After uploading documents, photos, and payment of fees, an application number will be generated. When logged in with this number, a table shall be displayed showing all documents and geo-tagged photos uploaded by the applicant. Each row indicates whether the item has been verified:-

a. If verification is successful, the review row shows "Verification Completed."

b. If discrepancies are found, the review row shows "Rectification remarks" and an option to re-upload the specific document/photo is provided in the adjacent column.

vi. Final Approval and Certificate download:

- Once all uploaded documents are verified by the Joint Director of Medical and Rural Health Services, the approval and certificate issuance should be accessible through the applicant's login. Additionally, it was decided that the certificate issued by the Tamil Nadu Clinical Establishments Authority (TNCEA) shall feature a QR code indicative of the source of accreditation. Hence, the accreditation details can be readily identified.

B. Elimination of non-essential documentation requirements:

The TNCEA registration and renewal process shall be revised to remove the mandatory submission of the Ambulance Agreement, Mortuary Ambulance Agreement, and Laboratory Memorandum of Understanding for those establishments that possess these facilities in-house.

- The documents required for Hospitals registration are annexed in Annexure I
- The documents required for Clinics and Centers are annexed in Annexure II
 - Among the above documents, the Doctors' TNMC Registration number, Nurses' TNNMWC Registration number, and Pharmacist Registration number, Physiotherapist Certificate number shall be provided in a bulk upload under the heading "Total number of staff" and accompanied by an online self-declaration submitted by the applicant for registration of the private clinical establishment.
 - In addition, to ensure dynamic accuracy, this upload shall be updated every half year (September 30 and March 31). Upon submission, these periodic updates shall be verified by the Joint Director of Director of Medical and Rural Health Services. The updates will be reflected in the respective Clinical Establishment's profile only after the concerned Authority has scrutinized and formally approved the submission. Further, it was decided to introduce a dedicated "Change of Medical Personnel" option to allow establishments to update staff details independently without affecting the validity of their existing registration.

III. Categorization of Laboratory:

The classification of laboratories comprising basic Composite, Medium and Advanced tiers, along with their corresponding human resource requirements, as per the Clinical Establishments (Central Government) Amendment Rules, 2018 and 2020 shall be incorporated into the Tamil Nadu Clinical Establishment Rules to establish a standardized regulatory framework that aligns professional qualifications with the technical complexity of diagnostic services.

The following categories of laboratories shall be introduced:-

- i. **Basic Composite Laboratory:** This category covers routine investigations such as blood sugar, haemograms, and basic infection. It requires at least a Laboratory Technician and Support Staff member. MBBS doctor (or) M.Sc. in Pathology (or) Medical Microbiology, or Medical Biochemistry with one year of experience to sign reports.
- ii. **Medium Laboratory:** This category encompasses routine investigations and it requires at least a Laboratory Technician and Support Staff member. The technical head must be a post-graduate (MD/DNB) in Pathology, Biochemistry, or Microbiology, or an MBBS with a PhD in these specific fields. Authorized signatories must be medical specialists (MD or DNB) in Pathology, Biochemistry, Microbiology, or Laboratory Medicine, or an MBBS with a Ph.D. in these fields are permitted to sign reports in their respective specialties after three years of post-Ph.D. experience.
- iii. **Advanced Laboratory:** These centers handle diagnostics, including molecular biology/Pathology/Biochemistry/Microbiology. It requires a Laboratory Technician and a Support Staff member. The authorized signatory must be a medical doctor (MD/DNB) or a PhD holder.

For the above Three categories the common experience is, they should have at least three years of post-doctoral experience in laboratory of same or higher level in a government or recognized medical college or hospital or institution or organisation shall be entitled to conduct the tests, generate, sign and issue test reports in respect of tests of their respective specialty.

The above categories of laboratories seeking registration under the TNCEA must choose between NABL or Non-NABL accreditation categories. Establishments opting for the Non-NABL category are required to submit all standard documentation along with an online self-affidavit.

IV. Categorisation of Aesthetic, Hair Restoration, and Cosmetology Services:

It was also decided that the classification of establishments providing aesthetic and hair restoration services, along with their corresponding infrastructure and human resource mandates, as per the National Medical Commission (NMC) guidelines, shall be incorporated into the Tamil Nadu Clinical Establishment Rules. It was further decided that to maintain high clinical standards, these services shall be categorized on the complexity of the procedures and the specific qualifications required for their practitioners shall be as follows:

- i. Hair Restoration Surgery (Hair Transplant): This category encompasses surgical hair restoration procedures which must strictly be performed by a Registered Medical Practitioner (RMP). Establishments performing hair transplants are mandated to maintain basic facilities for monitoring and handling medical emergencies. Required infrastructure includes the stocking of emergency drugs, a Boyles machine, intubation sets, and Ambu bags. These procedures shall preferably be undertaken only by practitioners with formal surgical grooming and training, specifically holding an MCh/DNB in Plastic Surgery or an MD/DNB in Dermatology.
- ii. Aesthetic Procedures: This category covers various aesthetic and surgical procedures. Given that these are elective and not emergency surgeries, they shall be performed only by a Registered Medical Practitioner who is a Qualified Dermatologist or a Trained Surgeon. These establishments must ensure adequate anesthesia backup, requiring the presence of an anesthetist within the operation room area and the immediate availability of necessary anesthetic drugs. The RMP shall ensure that every surgery has received adequate pre-operative clearances from both a medical specialist and an anesthetist. The facility must be equipped to monitor vitals throughout the procedure.
- iii. Cosmetology Clinic: A common minimum standard is established for clinics offering cosmetology services. These clinics must be manned by a Dermatologist or a Plastic Surgeon. All clinical procedures within these establishments shall be undertaken in strict accordance with the minimum practice guidelines as prescribed by the Indian Association of Dermatologists, Venereologists, and Leprologists (IADVL) and the Association of Cutaneous Surgeons of India (ACSI).

V. Integration with e-Sevai platform:

The application process for registration, including cases with accreditation or fresh registration and renewals, shall be integrated onto the e-sevai platform. This integration is expected to enhance user accessibility and mitigate the technical challenges frequently encountered on the current portal. Leveraging the established infrastructure and reliability of the e-sevai platform will ensure improved access.

Consequently, applicants can anticipate a more intuitive interface and streamlined service delivery, which will contribute to increased compliance and administrative efficiency for both users and the department.

VI. Online Self Declaration:

- The self-declaration required for clinical establishment registration in lieu of submitting the documents shall be integrated as an online declaration within the registration portal. It was decided that the applicant must tick this checkbox to digitally "sign" the self-declaration before submitting the application, serving as an electronic signature acknowledging the declaration's terms.
- For enhanced legal validity, the system shall implement an OTP (One-Time Password) method to authenticate the applicant at the time of ticking the checkbox. Upon submission, the system will log the date, time, IP address, and device information as proof of consent.
- The declaration text, applicant details, and signed checkbox confirmation will be compiled into a PDF document and securely stored for legal, audit, and future reference purposes.

VII. Details to be provided during the Application:

- The information provided by the clinical establishment shall be designed so as to be auto fetched based on their previous application for the renewal process.
- After obtaining registration, if the clinical establishment makes any changes such as an increase in the number of beds or appointment of new doctors or nurses, these updates can be made on the same portal where the registration certificate was originally obtained.

5. The Government have examined the decision of the Empowered Committee considering the challenges faced in the existing procedure. After examination, the Government have decided to accept the decision of the Empowered Committee and issue orders accordingly.

6. The Tamil Nadu e-Governance Agency (TNeGA) is requested to take action for the online processes for the revised procedure through the e-Sevai or similar alternatives so that the revised process is available immediately to the public.

(BY ORDER OF THE GOVERNOR)

P. SENTHILKUMAR

ADDITIONAL CHIEF SECRETARY TO GOVERNMENT

To

The Director of Medical and Rural Health Services, Chennai- 600 006.

Annexure-I

G.O (Ms) No.41, Health and Family Welfare (Z2) Department, dated 13.02.2026

The documents required for Hospitals registration are accordingly rationalised as follows: -

S.No	Documents required
1	(Application form in built)
2	Self-declaration submitted by the applicant (registered medical practitioner) mentioning the registration number of Doctors, Nurses, pharmacists, lab technicians, physiotherapists employed as a single document
3	Sanitation Certificate
4	Bio Medical Waste Agreement
5	Fire Safety License & Fire Safety Extinguisher
6	Rental Agreement
7	List of major equipment available
8	Pollution Control Board License (CTE/CTO - if applicable)
9	AERB Certificate (if applicable)
10	PCPNDT License (if applicable)
11	ART License (if applicable)
12	Building Stability Certificate (Public Building License)
13	Pharmacy License (if applicable)
14	Blood Bank License (if applicable)
15	Lift License (if lifts are available)

G.O (Ms) No.41, Health and Family Welfare (Z2) Department, dated 13.02.2026

SELF DECLARATION

I, _____, S/o/D/o/W/o _____, aged ____ years, residing at _____, and being the person-in-charge of the clinical establishment known as _____, located at _____, do hereby solemnly affirm and declare as follows:

1. That all the particulars, information, and documents submitted in this application for the registration of the clinical establishment under the Tamil Nadu Clinical Establishments (Regulation) Act, 1997, are true, correct, and complete to the best of my knowledge and belief.
2. That the Doctors' TNMC registration number/ Nurses' TNNMWC registration number/ Pharmacists' registration/ Physiotherapists' registration number uploaded as part of this application are authentic and valid.
3. That any alterations in the employment status of registration number holders, including removal or cessation of existing registered doctors/ nurses/ pharmacists/ physiotherapists, shall be updated in the prescribed portal or authority within the prescribed time limit. Similarly, any new appointments of such personnel shall also be promptly updated within the prescribed time frame.
4. That I have not fabricated, falsified, forged, tampered with, misrepresented, or concealed any document, information, or material fact in support of this application.
5. That I fully understand and acknowledge that if any information or document furnished by me is found to be false, fabricated, suppressed, or misleading, I shall be liable for criminal prosecution under the Tamil Nadu Clinical Establishments (Regulation) Act, 1997, the Bharatiya Nyaya Sanhita, 2023, and/or any other applicable laws, which may result in penalties including imprisonment, fines, or both.
6. That I shall also be liable for any other legal consequences, including the cancellation of the registration of the clinical establishment and any other liabilities arising therefrom.

7. That I undertake to produce all relevant documents and information as and when required by the inspecting officer or any competent authority.
8. That this declaration constitutes a binding legal undertaking, enforceable against me by law.
9. That the contents of this declaration are true and correct to the best of my knowledge and belief, and nothing material has been concealed therein.
